February 4, 2022

To whom it may concern:

Pure Storage learned about the Log4Shell vulnerability on December 10, 2021, and immediately activated its incident response process to investigate the impact of the vulnerability to Pure Storage's enterprise environment.

Our investigation determined that a small subset of corporate infrastructure systems were affected by the Log4Shell vulnerability. In response we:

- Patched Internet facing systems
- Implemented mitigations to monitor & block threats at the edge as we continue to remediate internal systems
- Continue to monitor our key partners and their mitigation efforts

We are committed to ensuring our customers, products, and services are protected from any potential exploits through our defensive in-depth capabilities and application of proactive measures.

Note: Pure Storage, Inc. does not store any customer data.

For information regarding the impact of the Log4Shell issue on Pure Storage's products and services, please see Pure's response to the Log4j vulnerability.

Sincerely,

Pure Security Office
